1.0 PURPOSE OF DOCUMENT

Colliers Engineering & Design (CED) was contracted by NiSource Inc. (NiSource) to perform a cultural resource background review for the East Columbus Project (Project) in Columbus, Franklin County, Ohio. This background review and desktop assessment has been prepared in accordance with Section 106 of the National Historic Preservation Act (NHPA) of 1966. This regulation requires project proponents to consider a project's effects on historic properties depending on potential permitting requirements and/or funding sources. The purpose of the document is to outline any previously recorded cultural resources that may be impacted by the proposed Project in support of NiSource's compliance with Section 106 of the NHPA. The goal is also to provide information for project planning and development, as well as estimates on possible future work that may be required for regulatory compliance. A cultural resources survey was not conducted as an element of this research.

2.0 INTRODUCTION

2.1 PROJECT DESCRIPTION

The Project proposes to install about 8.1 miles (13.04 kilometers [km]) of 24-inch-high pressure steel main line pipeline.

2.2 PROJECT LOCATION

The Project area originates 31 meters (101.76 feet) southwest of the intersection of Windbrook Drive and Taylor Station Road and terminates at the intersection of Woodland Ave and Denune Ave in Columbus, Franklin County, Ohio. The Project is depicted on the *Northeast Columbus, Ohio* US Geological Survey (USGS) 7.5-minute topographic map quadrangle.

2.3 EXISTING CONDITIONS AND VICINITY CHARACTERISTICS

The Project area consists mostly of suburban neighborhoods with a few commercial buildings and a very small, wooded area on the easternmost side. The Project area has been subject to heavy disturbance from residential and commercial construction activities for many years. The Project area is bordered on all sides by further residential and commercial development.

3.0 ENVIRONMENTAL BACKGROUND

3.1 PHYSIOGRAPHY AND GEOLOGY

The Project area is in the Loamy, High Lime Till Plains ecoregion of the Eastern Corn Belt Plains physiographic province of Ohio. The Loamy, High Lime Till Plains ecoregion covers most of southwestern Ohio all the way through central Indiana. This ecoregion is flat to rolling and has outwash plains and terminal moraines glacial features. Soils are loamy on lime-rich glacial till. The Project area is underlain by Wisconsin glacial deposits consisting of mostly loam. Most of the forests have been cleared for agriculture and now the area is utilized mostly for soybean, corn, and livestock production (Woods, et al. 1998).

The Project is underlain by the Ohio Shale geological formation. The Ohio Shale geological formation consists of mudstone, siltstone and very fine-grained sandstone that ranges from reddish-brown to purple. There are also sand filled burrows two to five meters thick bordering the formation. Shale and sandstone also make up a majority of the valley's lowlands and ridges. Diabase layers underline the main formation of the region (Slucher et. al 2006).

3.2 TOPOGRAPHY AND SOILS

The Natural Resources Conservation Service (NRCS) Soil Survey for Franklin County, Ohio available on the Web Soil Survey, identifies twenty (20) soil types underlying the Project area (**Table 1**). Soils range from poorly drained to well drained (NRCS 2022).

Table 1. Soil Types in the Project Area

Soil Symbol	Soil Name	Slope %	Drainage	Landform
AdC2	Alexandria silt loam	6-12	Well Drained	Moraines, till plains
AdD2	Alexandria silt loam	12-18	Well Drained	Moraines, till plains
AdE2	Alexandria silt loam	18-25	Well Drained	Moraines, till plains
BeA	Bennington silt loam	0-2	Somewhat Poorly Drained	End moraines, ground moraines
BeB	Bennington silt loam	2-6	Somewhat Poorly Drained	End moraines, ground moraines
BfA	Bennington-Urban land complex	0-2	Somewhat poorly drained	Ground moraines, end moraines
BfB	Bennington-Urban land complex	0-6	Somewhat poorly drained	Ground moraines, end moraines
CbB	Cardington-Urban land complex	2-6	Moderately well drained	Ground moraines, end moraines
Cn	Condit silt loam	-	Poorly Drained	Ground moraines
Crd1B1	Cardington silt loam	0-2	Moderately Well Drained	End moraines, ground moraines
Crd1C2	Cardington silt loam	6-12	Moderately Well Drained	End moraines, ground moraines
Ee	Eel silt loam	0-2	Moderately Well Drained	Flood-plain steps
ElB	Eldean silt loam	2-6	Well Drained	Outwash terraces

Soil Symbol	Soil Name	Slope %	Drainage	Landform
EIC2	Eldean silt loam	6-12	Well Drained	Outwash terraces
EID2	Eldean silt loam	12-18	Well Drained	End moraines, kames, outwash terraces
EmA	Eldean-Urban land complex	0-2	Well Drained	Terraces, moraines, eskers, kames
KeB	Kendallville silt loam	2-6	Well Drained	Terraces, moraines
Mh	Medway silt loam	-	Moderately Well Drained	Flood plains
Pm	Pewamo silty clay loam	0-2	Very Poorly Drained	Flood plains
Pn	Pewamo low carbonate till- Urban land complex	0-2	Very Poorly Drained	Flood plains
Sh	Shoals silt loam	-	Somewhat Poorly Drained	Flood plains
So	Sloan silt loam, Columbus Lowland	0-2	Very Poorly Drained	Flood plains
Ut	Udorthents-Urban land complex	2-12	--	--
WdA	Warsaw silt loam	0-2	--	--

4.0 CULTURAL RESOURCE DESKTOP REVIEW

The following information was gathered as part of the desktop review to identify previously recorded cultural resources within a 0.5-mile (0.8-km) radius of the Project area. The background review consisted of a cultural resources and literature review of the Project area. A CED archaeologist reviewed the online database hosted by the Ohio History Connection (OHC), the State Historic Preservation Office (SHPO) of Ohio, for any previously recorded surveys, historic or prehistoric sites, and cemeteries located in or near the Project. Site files, relevant maps, and National Register of Historic Places (NRHP) locations were also examined. Aerial photographs, topographic maps, and the NRCS Web Soil Survey were also examined for historical and environmental information related to the Project area.

4.1 PREVIOUSLY CONDUCTED CULTURAL RESOURCE SURVEYS

The background review revealed that two (2) previous archaeological surveys have been conducted in portions of the Project area. The first was a “Phase I Cultural Resource Management Investigation of the 2.725 Ha (6.734 A.) Proposed Construction Site for the Providence Glen Apartments and the Corban Commons Apartments in Mifflin Township, Franklin County, Ohio” conducted in 1998, and the second one was “Phase I Cultural Resources Management Investigation for the 25.6 Ha (63.3 A.) Proposed Construction of the United States Postal Service Facility in Mifflin Township, Franklin County, Ohio” conducted in 1999. Both surveys intersect the Project Area at Agler Rd and Gatewood Rd. Several additional surveys have also been conducted within a 0.5-mile (0.80 km) radius of the Project area (OHC 2023) (**Table 2**).

Table 2. Previously Conducted Cultural Resource Surveys within 0.5 mile (0.8 km) of the Project Area.

Project Name	Investigating Firm	Date of Survey	Distance to Project Area
Archaeological Survey of Proposed Interstate 315 - (Columbus & Worthington) Franklin County, Ohio	Ohio Department of Transportation	1976	48.2 meters N (58.4 feet)
An Archaeological Literature Review and Survey: Proposed Olentangy River Bicycle Path in the City of Columbus, Clinton Township, Franklin County, Ohio	ASC Group, Inc.	1990	16.1 meters S (52.8 feet)
Phase I Cultural Resources Survey of NiSource's Proposed Ackerman Road 20-inch Natural Gas Pipeline Project in the City of Columbus, Franklin County, Ohio	URS Corp., Cincinnati	2012	Intersects
An Eligibility Assessment of Site 33FR801 within the Proposed Olentangy River Bicycle Path in The City of Columbus, Clinton Township, Franklin County, Ohio	ASC Group, Inc.	1991	16.1 meters S (52.8 feet)
Phase II National Register Testing of Site 33-FR-801, for the Proposed Ackerman Road 20-inch Natural Gas Pipeline Project in the City of Columbus, Franklin County, Ohio (OPSB case # 11-3534-GA-BTX)	URS Corp., Cincinnati	2012	32.2 meters SE (105.6 feet)

Phase I Archaeological Investigations for the 7.2 ha (17.9 ac) Havens Meadows Housing Development in Jefferson Township, Franklin County, Ohio	Weller & Associates, Inc	2019	400 meters N (1,312.3 feet)
Phase I Archaeological Survey of Select U.S. Army Reserve Facilities in Ohio, (Gahanna & Blacklick) Franklin, and (Cincinnati) Hamilton Counties, Ohio	Brockington and Associates, Inc.	2015	450 meters S (1,572 feet)
Phase I Cultural Resource Management Investigations for the FRA-270-37.04 Interchange 37 / Hamilton Rd Median Improvement Project and FRA-Tech Center Drive Improvement Project in the City of Gahanna, Franklin County, Ohio	EMH&T, Inc.	2008	Intersects
Phase I Archaeological Survey for the Proposed Bridgeway Hangar Development Project, Port Columbus International Airport, City of Columbus, Franklin County, Ohio	ASC Group, Inc.	2016	478.1 meters SW (1,568.7 feet)
Literature Review and Archaeological Reconnaissance Survey for Proposed Gahanna Riverwalk Project, Gahanna, Franklin County, Ohio	Hardlines Design Co.	1997	218.4 meters NE (716.79 feet)
Literature Review and Reconnaissance Survey of the Proposed Improvements Along Stelzer Road From Morse Road To Interstate 670 In Blendon And Mifflin Townships, Franklin County, Ohio	ASC Group, Inc.	1992	Intersects
Phase I Cultural Resources Management Investigations for the Approximately 18.21 ha (45 a.) Village at Stonecliff Housing Development in the City of Columbus, Franklin County, Ohio	EMH&T, Inc.	2004	363.1 meters S (1,119.39 feet)

4.2 PREVIOUSLY RECORDED CULTURAL RESOURCES

Based on the review, there are no archaeological sites or above-ground historic resources documented within the Project area; however, there are multiple cultural resources documented within a 0.5-mile (0.80 km) radius of Project area as summarized below (OHC 2023) (**Table 3**).

Table 3. Previously Recorded Cultural Resources within 0.5 mile (0.80 km) of the Project Area.

4.3 HISTORIC TOPOGRAPHIC MAPS AND AERIAL IMAGERY

Historical topographic maps and aerial photography revealed existing suburban housing near the Project area from at least 1954 to the present (USGS 1954, 1955, 1964, 1965a, 1965b, 1995a, 1995b, 2010a, 2010b; Nationwide Environmental Title Research [NETR] 2022a, b, c, and d). The vicinity has remained mainly developed land with large areas of gridded residential structures that gradually increased over time from the 1960s to the present (NETR 2022a-d).

5.0 SUMMARY AND RECOMMENDATIONS

The Project proposes to install about 8.1 miles (13.04 km) of 24-inch high pressure steel main line pipeline. The Project area originates 68 meters (223 feet) southwest of the intersection of Windbrook Drive and Taylor Station Road and terminates at the intersection of Woodland Ave and Denune Ave in Columbus, Franklin County, Ohio. The Project is depicted on the Northeast Columbus, Ohio US Geological Survey (USGS) 7.5-minute topographic map quadrangle.

A Cultural Resource A desktop review was conducted for the Project, consisting of a compilation of known above-ground historic resources, archaeological sites, and previously conducted cultural resources surveys. The review revealed that there are no above-ground historic resources or subsurface archaeological sites within the Project area. However, there are over one hundred previously recorded cultural resources within a 0.5-mile (0.8-km) radius. These results are depicted in **Appendix B**.

Based on the information provided and the results of this desktop assessment, CED would recommend a cultural resources survey should the Project proceed. Previously documented resources in the immediate vicinity indicate a moderate to high probability for encountering archaeological sites within or adjacent to the Project area. This background review and assessment was conducted in support of NiSource's compliance with Section 106 of the NHPA.
